Actions

Applies to ...

Object	Description
DoCmd	Root class. When present, its name must be "DoCmd" but the object name is optional.

Syntax

```
[DoCmd.]ShowAllRecords( )
```

Remarks

- The *ShowAllrecords* action is usually preceded by a **SelectObject** action or by the **SetFocus** method applied on the targeted *form*.
- *ShowAllRecords* returns **True** if the action was successful, **False** otherwise.
- The *ShowAllrecords* action must not be triggered from a **standalone form**. Use the **FilterOn** property instead.
